Skills

Able to use languages and frameworks to build web applications for front and backend services. These include Javascript, React, TypeScript, CSS, NodeJS, Express, MongoDB and Git.

Projects

Inventory management

A web app that allows users to view all items with relevant information and edit the inventory with admin privileges. This project was used to practice the use of MongoDB on a cloud based service and gain experience creating API methods. React was used to build the frontend and NodeJS was used for the backend.

CV creator

A web app that provides a CV template for users to fill in. Edits are updated live in the preview area and can be downloaded once completed. The aim of this project was to become comfortable using unique React based concepts such as props and states.

Weather website

Displays the weather forecast for a queried location. The goal of this project was to gain experience using existing APIs such as reading documentation and understanding how to fetch for specific data.

Education

SEP 2018 - MAY 2022

University of Dundee, Scotland – *Bsc (Hons) Applied Computing*

Four year course studying multiple languages and computer science concepts. Completed course with second class lowers (2:2).
